February 28, 2023

1. Introduction and Background

The director-level employees nominated to assume roles as vice presidents of E-Com company must first complete the Leadership Development Program. The Leadership Development Program focused on improving E-com director-level employees' time management, team development, leadership, and collaboration skills.

E-commerce is a clothing company that sells products for a limited time at discounted prices. The company director works in different departments, such as merchandising, creativity, technology, marketing, production, editorial, and people management. The company is based in New York and has warehouses across the United States.

Evaluation Team

Liangke Yang is currently a Ph.D. student in Learning, design, and technology at the University of Georgia. She has three years of experience participating in English project design for ESL kids in China. She also has experience designing and conducting assessments for her projects.

Diego Morgado Innocencio is a MEd student in Learning, design, and technology at the University of Georgia. He has experience working as a Freelance Graphic and UX Designer. He is currently a Graduate Assistant at the Center for Latino Achievement and Success (CLASE).

2. Evaluation Purpose

This evaluation aims to determine if the Leadership Development Program achieves the objective of enhancing the time management, team development, leadership, and collaboration skills of E-com director-level employees. The company decides to hire an evaluation team to analyze the whole program effectiveness.

The evaluation team will use a formative evaluation with participants and personnel involved (instructors and instructional designers) to determine the training program's effectiveness. The participants will be assessed with courses of the training modules about their expectations and experiences during the training. The results will be compared to the participants' expectations and the stakeholders' desired performance and goals.

The training modules will also be summatively evaluated to determine the program's value and the stakeholders' expected results, including the course materials assessment, the quality of the instructors’ teaching experience, the effectiveness of the training in developing participants’ leadership skills, etc.

The data analysis will be collected to compare with previous information about the productivity of past vice presidents during their allocation period in their new roles. The effectiveness of this training program for participants' preparedness will be tested. All results will be arranged to a detailed report, and desired changes and needs will be presented to the stakeholders.

3. Stakeholders

Table 1. Stakeholder Information

Stakeholder	Importance Level	Perspective of Interest	Role in the Evaluation
eLearning program participants (learners)	*Primary*	• *Program quality* • *Time cost* • *Efficiency of learning outcomes*	• *Participation in the data collection* • *Participation in one-to-one meeting*
eLearning program design team(instructional designers)	*Primary*	• *Program quality* • *Effectiveness of the learning program* • *Problems* • *Suggestions or feedback*	• *Involvement in the evaluation planning* • *Increasement of the quality and depth of evaluation questions* • *Supervision during the whole process*
Facilitator(instructors)	*Secondary*	• *Program quality* • *Suggestions or feedback*	• *Participation in evaluation planning* • *Participation in interviews as interviewees*
Human Resources team(the client)	*Primary*	• *Effectiveness of the learning program* • *Cost* • *Risk identification* • *Cultural concerns*	• *Time management for the evaluation* • *Approval for the evaluation plan* • *A recipient of the evaluation report*

4. Logic Model

Table 2. A Simplified Logic Model in a Table Form

Context

The Leadership Development Program 6-month course format, structured in 6 learning modules. The course consists of webinars and coaching sessions where participants will enhance their leadership skills through activities and lectures.

Population and Needs

Population: The learners for this training were Director-level employees preparing to step into roles as Vice Presidents from all departments in this company.

Needs:

- *Be more focused with time*
- *Learn how to build your team*
- *Expand leadership to influence others*
- *Collaborate with other departments*
- *Build a leadership brand*

Age and Phase

This training is designed by a leadership development firm and monitored by the client success manager. It is in the process of implementation and working as a training.

Resources/Inputs	Activities	Outputs	Short-Term Outcomes	Long-Term Outcomes
Funding *Instructional designers who designed the courses* *Internal evaluator* *Technology* *Training instructor* *Learning materials (Workbook, PPTs)* *E-com director level employees*	*Different modules for different learning purposes:* *1. Reading and reflection* *2. Group learning discussion* *3. Experiment with new practice and behaviors* *Assignments during the modules* *Downloadable worksheets* *Goal tracking with partner and managers*	*Develop time management skills* *Learn how to create a team and maintain it (team-building skills)* *Develop leadership skills*	*Short the gap between vice presidents and the employees* *Make a more smooth transition between positions* *Build the network with company employees*	*Building participants' leadership brand* *Prepare Director-level employees to assume vice president position job* *Beneficial for company development*

5. Evaluation Questions

Stakeholder	*Stakeholder Needs*	*Evaluation Focus Areas*	*3-5 Evaluation Questions*	*Evaluation Design*
eLearning program participants (learners)	*Effectiveness of the training program* *Be prepared for their promotion*	*Training program effectiveness* *Skill development for themselves*	*How effective is the training program in preparing participants to assume the vice president position job?* *How does the training program develop the leadership skills of the participants?* *What suggestions for teaching with the instructors?*	*Module survey from each participant detailing what worked for them in each training module* *Post-presentation feedback from participants after each module*
eLearning program design team(instructional designers)	*Effectiveness of the training program* *Succeed in the implementation* *Improvement for content of training program*	*Effectiveness of learning materials* *The training perceives learning objectives*	*Are the materials effective in helping instructors presenting the modules?* *Are the participants able to complete all assignments at the proper time?* *How does this training program benefit participants?*	*Participant survey about course materials impressions and quality* *Participant groups comparison* *Pre and post survey to test their knowledge*
Facilitator (instructors)	*The assessment of the teaching* *Content update for the training program*	*Feedback from teaching experience* *Changes needed for learning materials*	*What subject or module content the participants struggled, if any, with during their leadership program?* *Do the modules help improve participants' leadership skills?* *What suggestions do participants have to enhance their learning experiences?*	*Post-presentation feedback from instructors* *Participants' reflections on instructors*
Human Resources team(the client)	*The quality of the training preparing employees to the promotions* *Succeed in the implementation* *Maintain the training program with an acceptable budget*	*The effectiveness of the whole training program* *The cost (time, money, technology, etc.)*	*Does the training program help in the process of adaptation of the participants in the new roles assigned to them?* *Does the training program help productivity?* *Does the training program decrease the cost during the employment adaptation process?* *Is this program effective to maintain?*	*Case studies comparing participants* *Pre and post Survey with company employees* *Post workshop for employees after they have promotions*

Evaluation Design Rationale

To improve E-com director-level employees' time management, team development, leadership, and collaboration skills, the company implemented a training program to help those people smoothly transfer to the new positions. However, since there needs to be more data to prove the effectiveness of this training program, an evaluation plan is made to test if this training program works for those people.

After discussion, the evaluation team believes that each stakeholder's needs should be evaluated for this program. They decide to collect qualitative and quantitative data by assessing each stakeholder's needs. The evaluation team will collect participants' and instructors' responses and feedback from interviews and workshops for the qualitative data. Quantitative data will consist of responses from surveys, reflections, and workshops. Those responses mainly focus on evaluating the course performance, materials, instructors, and overall experience. All data will be kept confidential.

The data analysis is proposed to compare past vice presidents' productivity levels and implementation during the transition period. New data collected focusing on the employees' responses that participated in the training program will be compared to past employees who were not subjected to the new program. Results will be analyzed and reported to stakeholders.
